

GMP – from Regulatory Requirements to Everyday Practice | company

Understand Regulatory Requirements in Your Everyday Work

Do you understand why you do things the way you do?

And do you know how much of a difference your individual contribution makes to the finished medicinal product?

About the course

[Read about the benefits of a company course](#)

GMP (Good Manufacturing Practice) consists of rules and standards that ensure medicinal products are manufactured consistently and safely. GMP supports quality, traceability and patient safety.

During the course, employees receive a solid introduction to GMP requirements for the manufacture of medicinal products. You gain a fundamental understanding of the requirements and responsibilities involved in working in a GMP-regulated environment.

Employees are introduced to the life science industry and the journey of a medicinal product to the market, while exploring the connection between regulatory requirements, quality and patient safety.

This intensive three-hour course is designed to bridge the gap between complex GMP regulatory requirements and your everyday work tasks.

Employees may be completely new to the industry and need to establish a fundamental understanding, or they may be experienced employees looking to refresh their knowledge of GMP requirements.

Target group

The course is aimed at both new and experienced employees who want to gain an understanding of regulatory requirements or refresh their knowledge of the latest developments and trends within GMP.

The course can be particularly beneficial when delivered across departments and functions.
